

Abstract

Research suggests that note taking is most effective when done by hand. i.e. handwritten notes. Certainly, typewritten or typed out notes are more efficient, however notes written by hand are retained by the human brain much longer.

Integrating handwritten notes into a computer based productivity workflow is tricky. So, in terms of hardware, if all you have is a smartphone, then we need to deal with the situation a bit differently.

This talk will introduce to you a simple system to integrate handwritten notes into your on-mode (Linux) based productivity workflow.

- Get of the problem of dealing with handwritten notes.

- Advantages of handwritten notes.

- Linux on mode workflow.

- Option 1: Hardware for handwriting NOT available.

- Option 2: Hardware for handwriting available.
